

# Amazing Fun Facts and Pictures for Kids: Unleash the Wonder of the World!

**Earth Facts for Kids**

**Facts about Earth**

It orbits the Sun in 365 days.

About 150,000 tons of meteoroids enter Earth's atmosphere each year.

Earth's core temperature is higher than the temperature on Sun's surface.

Outer Core

Inner Core

It's core has two parts - the liquid inner core and a solid outer core.

It has 1 moon (Luna).

71 percent of it's surface is covered with water (hence The Blue Planet).

Earth isn't round. It is a slight ellipse - spheroid.

It is the only planet in our solar system with liquid water on surface and oceans.

Antarctica is the coldest place on Earth.

## The Power of Fun Facts and Pictures

Learning is an exciting journey that awaits every child. Encouraging them to explore and discover the wonders of the world can be a thrilling experience for

both kids and parents. Fun facts and pictures not only ignite a child's curiosity but also help them remember information by making it enjoyable.

## Expand Knowledge through Fun Facts

### Nature is Awesome: Fun Facts and Pictures for Kids by Catherine Gourley (Kindle Edition)

★★★★☆ 4 out of 5

Language : English

Screen Reader: Supported

Print length : 192 pages

Why let learning be confined to the walls of a classroom when the whole world is brimming with fascinating facts? Fun facts provide an opportunity to dive into various topics, from animals and space to history and science. They captivate children with interesting tidbits that go beyond what they learn in textbooks, sparking their interest and driving their thirst for knowledge.

For instance, did you know that honey never spoils? It has been found perfectly preserved in ancient Egyptian tombs! These intriguing facts not only entertain kids but also encourage them to learn more about the world around them.

## **Amazing Animal World**

# Did you know???

Fun facts about the animals you might not be too familiar with.

An **Aardvark's** tongue can be up to 12 in (30.5 cm) long and is sticky to help extract termites from the earthen mounds.

**Quolls** are nocturnal (sleep during the day) marsupials found only in Australia, New Guinea, and Tasmania.

An **Ibis's** distinctive long, thin bill is used to probe for food in soft mud or under plants.

**Toucans** are very popular pets, and many are captured to supply demand for this trade.

A **Jackrabbit** is actually a hare and not a rabbit.

**Umbrettes** are also known as Hamerkops or "Hammer-heads." They are found throughout Africa, Arabia, and Madagascar.

**Macaws** are intelligent, social birds that often gather in flocks of 10 to 30 individuals.

**Xantusias** (also known as "night lizards") are nocturnal and consume insects and spiders. They are found in south-western United States and Mexico.

**Numbats** are marsupials found only western Australia and can consume up to 20,000 termites a day.

**Yaks** live in Tibet and parts of China. They can survive in the Himalayas at an altitude as high as 20,000 feet, which is the highest elevation of any mammal's habitat.

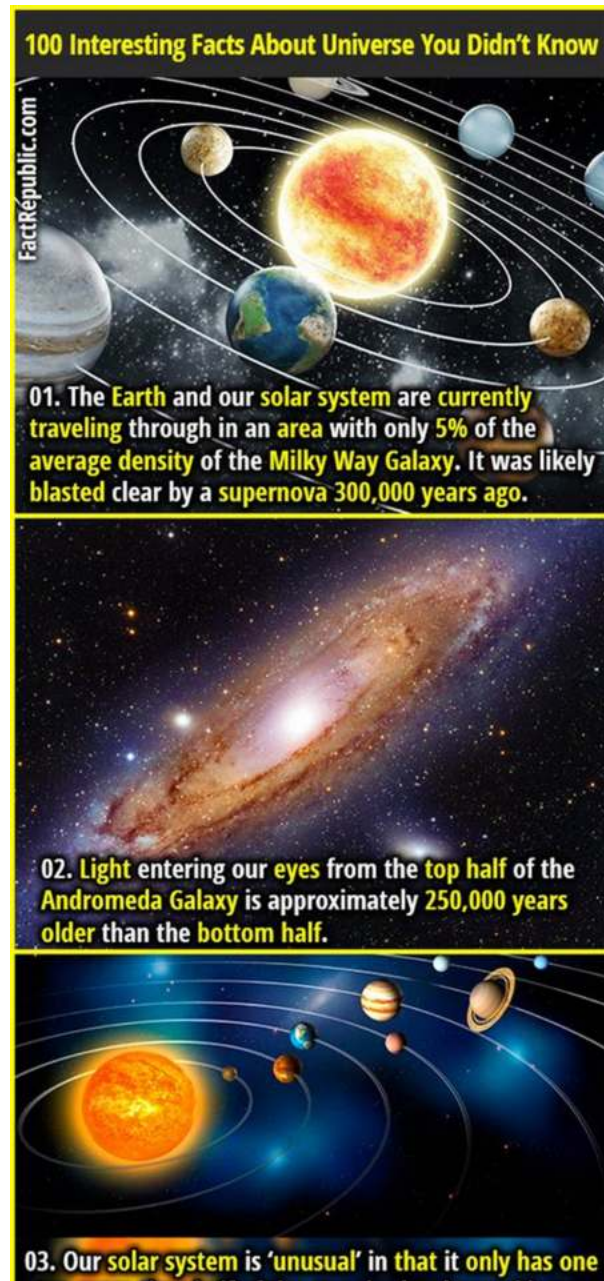

**Opossums** are the only marsupials (pouched mammals) found in the United States and Canada.

Animals have always fascinated children with their diversity and unique adaptations. Fun animal facts offer a glimpse into the lives of different species, helping kids understand the interconnectedness of the animal kingdom. Did you know that a giraffe's tongue is so long it can lick its own ear? Such incredible facts bring a sense of wonder and ignite a desire to learn more.

Explore the world of funny-looking axolotls, wise elephants, adorable red pandas, and many more through captivating photographs and intriguing facts.

## Unraveling the Universe

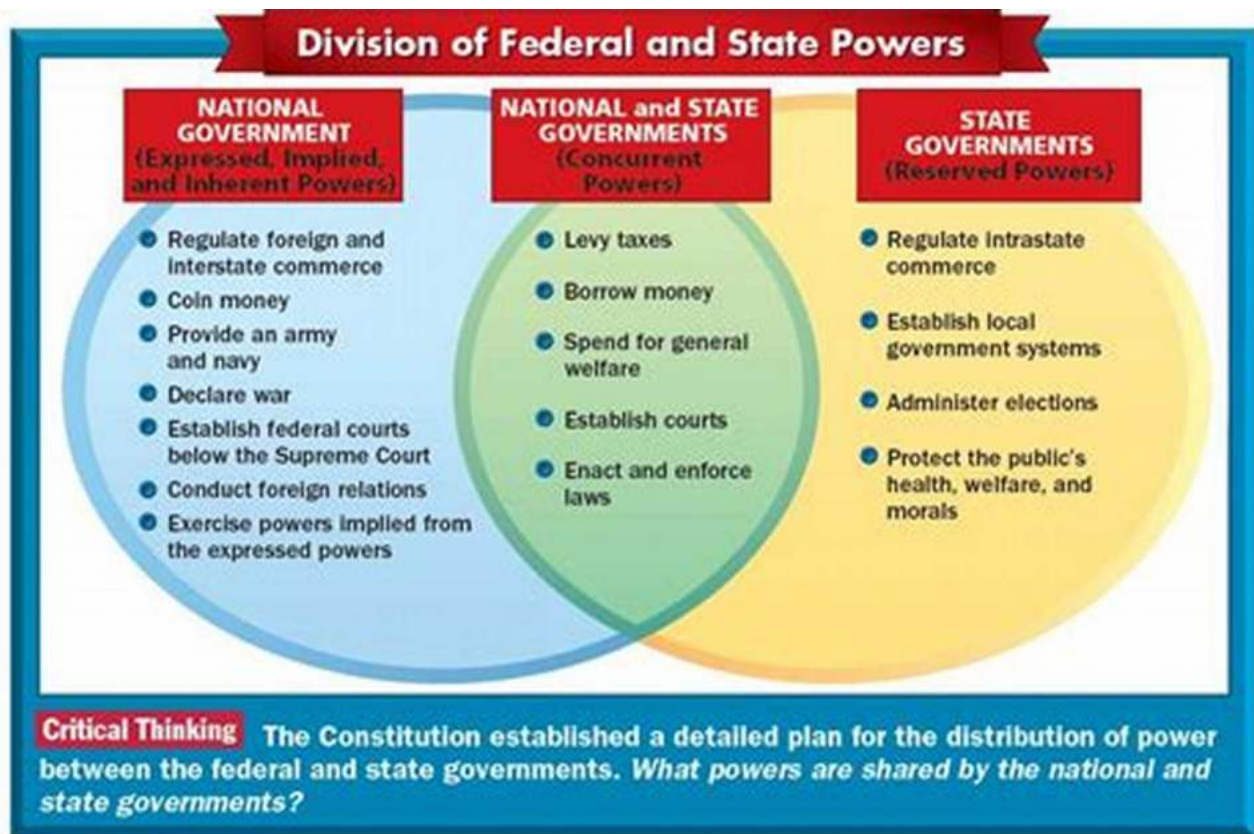

The vast expanse of the universe has always fascinated young minds. Fun space facts not only introduce kids to the wonders of the cosmos but also ignite their imagination. Uncover the mysteries of distant galaxies, learn about the astronauts

who have ventured into space, and delve into the awe-inspiring phenomena that occur beyond our planet.

Did you know that Saturn's rings are made up of billions of tiny pieces of ice and rock that orbit the planet? With captivating pictures and engaging facts, the mysteries of space become more accessible to young explorers.

## The Power of Pictures

Images have the power to leave a lasting impact on young minds. They provide visual cues and help children remember information more effectively. When combined with fun facts, pictures enhance the learning experience, making it more engaging and enjoyable for kids.

Moreover, pictures have the ability to transport children to different places and eras, allowing them to experience the wonders of the world in vivid detail. From dinosaur fossils to ancient civilizations, pictures bring history and science to life, encouraging children to develop a deeper understanding of the subjects.

## **Creating Lasting Memories**

Fun facts and pictures not only expand knowledge but also create lasting memories. Whether it's a funny fact shared with friends or a captivating picture that sparks their creativity, these experiences stay with children for years to come. It cultivates a love for learning that extends beyond the boundaries of formal education.

So, why not embark on the journey of exploration with your child? Unleash their curiosity, introduce them to the wonders of the world, and witness their minds expand with the power of fun facts and captivating pictures. The possibilities are endless, and the adventure awaits!

# April 22nd is Earth Day

Here are some things you can do to make our planet a better place to live.

Here are some things you can do to help plants and wildlife.

Do not disturb the natural habitats of plants and animals. Do not pick wildflowers or gather critters for pets.

Talk to people at home or to your teacher about planting a garden to attract butterflies and birds. These gardens provide habitats to replace those taken away by buildings, streets, and parking lots.

Pet waste has bacteria that can threaten fish and wildlife. Clean up after your dog so its waste can't drain into lakes, rivers, and streams during a rainstorm.

**Reduce**  
the amount of garbage you make.  
**Reuse**  
things instead of throwing them out.  
**Recycle**  
paper, plastic, glass, and aluminum.

- Fix something that's broken instead of throwing it away.
- When you buy something, carry it home without a bag or take your own bag to the store.
- Avoid using throw-away forks and cups.
- Refill empty bottles of water instead of buying new ones.
- Use both sides of every sheet of paper. Save scrap paper for recycling.
- Buy and use things that are made to last.
- Buy goods that require less wrapping and packaging.
- Reuse empty jars as holders for things like pencils and pens.
- Instead of throwing out food waste and grass clippings, use them to make compost, which turns into new soil.
- Separate trash so you can recycle paper, glass, aluminum cans, and plastic.
- Take old cell phones and other electronic equipment to a recycling center.

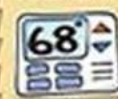

## Your Part

There are many ways to reduce your carbon footprint. One way is to use less energy. Another is to consume food items that require less energy during the production process.

Compact Fluorescent Lights, or CFLs, use 75 percent less energy than standard bulbs. Plus, they last longer. Talk with adults in your home about choosing CFLs instead of standard bulbs.

Help move furniture away from radiators, so heat goes into a room and is not absorbed by the furniture.

Heaters should not be kept freezing in summer and boiling in winter. Ask adults to keep the indoor temperature at 75°F in summer and 68°F in winter.

To cut down on pollution linked to shipping and packaging food, plant a vegetable garden. Talk with adults who buy your food about choosing food that is grown locally (within 100 miles of home).

Processed foods, which are frozen, canned, or packaged, carry a big carbon footprint. Eating fresh food reduces your carbon footprint. Whenever possible, choose baked potatoes instead of potato chips. Eat an apple instead of applesauce.

A book about nature sparks a child's imagination by introducing a child to the unique. Children are interested in things like where do certain animal come from

and where does the rain come from. Children are also interested in the sky and how far away it is from the ground. Nature will also teach children how animals and insects get their food. This will force children to paint a picture of this in their mind. This picture will become real to children of all ages.
