

The Tao of Oil Asteroids: Unveiling the Secrets of Energy Harvesting in Space

Space exploration has always been an intriguing subject, captivating the minds of scientists and enthusiasts alike. As we continue to push the boundaries of our knowledge, a new frontier emerges – the concept of harvesting resources from asteroids. Among the various resources available in space, one substance stands out for its immense potential: oil. In this article, we will dive into the fascinating realm of oil asteroids and explore the Tao behind this exciting venture.

The Quest for Infinite Energy

The limited supply of fossil fuels on Earth and the growing energy demands of our ever-expanding civilization have led scientists to explore alternative energy sources. One such alternative lies in the vast reaches of space, where countless asteroids float freely. These celestial bodies offer a treasure trove of valuable resources, including precious metals, water, and hydrocarbons such as oil and gas.

While oil on Earth has been a double-edged sword, its potential in space holds the promise of powering future space missions and even serving as a major energy source for our planet. However, extracting oil from asteroids is an ambitious undertaking that requires breakthrough technologies and a deep understanding of the Tao behind the process.

The Tao of Asteroid Mining

The central principle of the Tao in asteroid mining lies in the delicate balance between stability and change. It involves identifying, capturing, and extracting resources from asteroids while ensuring the preservation of essential celestial bodies. This Tao requires a harmonious collaboration between human ingenuity and the laws of the universe. Let us explore the key steps involved in the Tao of oil asteroid mining:

1. Identification:

A crucial aspect of the Tao is the ability to discern the potential of asteroids for energy harvesting. Scientists employ advanced telescopes, such as the Near Earth Object Observations, to locate and analyze asteroids that contain oil-rich deposits. The identification process not only involves pinpointing the right asteroids but also determining their composition and stability.

2. Exploration:

Once potential oil-rich asteroids are identified, space exploration missions are initiated to gather more detailed information. Probes and rovers are launched to study the asteroid's surface, composition, and internal structure, providing

valuable insights that influence the mining strategy. This phase requires a deep understanding of the Tao's constant change and adaptation.

3. Extraction:

Extracting oil from asteroids demands innovative techniques that align with the Tao's principles. Traditional drilling methods do not apply in space, giving rise to concepts like laser ablation, electrical extraction, and chemical separation. Implementing these methods harmoniously with the celestial environment is crucial for a successful extraction process.

4. Transportation and Refining:

Transporting the extracted resources back to Earth or utilizing them in space colonies is the next challenge that embodies the Tao of asteroid mining. Establishing efficient transportation systems, refining techniques, and storage solutions require aligning human endeavors with the inherent flow of the universe.

The Clickbait Title: Unleashing the Power of Infinite Space Oil – The Ultimate Energy Secret!

Intrigued by the limitless potential of oil asteroids? Unveiling the secrets of energy harvesting in space might just revolutionize our perception of energy sources. Imagine a world powered by oil extracted from celestial bodies, ushering in an era of clean and sustainable energy. This clickbait title encompasses the essence of this article, enticing readers to delve into the depths of the Tao behind oil asteroids.

The Future of Energy: From Earth to the Stars

As we gaze upon the future, the concept of resource harvesting from oil asteroids has the potential to redefine how we view energy. The Tao behind this endeavor encourages us to find harmony with the universe while embracing the wonders

that space has to offer. Space exploration, fueled by the power of asteroids, holds the key to unlocking our infinite energy future.

In , the Tao of oil asteroids merges the principles of balance, change, and adaptation with the pursuit of sustainable energy sources. This captivating venture unravels the secrets of space and offers mankind an opportunity to transcend the limits of our home planet. Let us embark on this cosmic journey, guided by the Tao, as we unlock the infinite potential of oil asteroids.

Crude oil is essential to develop and sustain the American economy. What if Americans have been misinformed about the nature of crude oil? This book explores that issue. It is by a retired trial lawyer who has been exploring for oil in Central America for 20 years. It is in the form of a final argument based on the idea experts cited as sources had testified at trial and the book summarizes their testimony.

Chapter 1 reviews the nature of the proof crude oil is abiogenic in origin. There is no modern scientific evidence supporting the ancient hypothesis that the source

of crude oil is remains of dead plants and animals. The fossil fuel theory is no more than an ancient delusion that has been perpetuated mostly by American oilmen. The fossil fuel hypothesis has no underlying scientific proof.

Chapter 2 proves the abiogenic origin of crude oil by showing how chemistry fingerprints oil to its source 100 kilometers into the Earth's mantle. Earth can be viewed as a gigantic oil refinery. We know the heat and pressure 100 kilometers into the mantle. We know there is within the mantle methane, sulphur, nickel and vanadium. The chemical reaction between methane and sulphur at mantle conditions where there is little sulphur and sufficient nickel for a catalyst produces high gravity oil. The chemical reaction between methane and sulphur where there is a lot of sulphur and vanadium for a catalyst makes low gravity oil. Using this hypothesis any oil found shows this chemical fingerprint. Low gravity oil has high sulphur content and high vanadium content. High gravity oil will have little sulphur and relatively high nickel content compared to vanadium.

Chapter 3 presents proof the atmosphere is not a greenhouse and in fact atmospheric CO₂ is not a warming molecule when loose in the atmosphere of the Earth. CO₂ has a warming effect in a box with a glass cover compared to other molecules within the box but only because of the physical nature of a greenhouse. Solar radiation penetrates the glass cover and irradiates CO₂ molecules turning the energy of radiation into heat. Heat convection waves, unlike solar radiation, cannot penetrate the glass cover so the heat stays within the greenhouse. There is no glass cover around the Earth. Earth's atmosphere is not a greenhouse. Global Warming is yet another 20th Century scientific delusion.

Chapter 4 describes how all oil fields are associated with deep basinal cracks from the 3 largest asteroid impacts since 544 million years ago. These impacts

were so massive they made cracks 100 kilometers into the mantle of the Earth providing pathways for oil to reach the surface.

Chapter 5 reviews how belief in the scientific delusions “global warming” and “fossil fuel” have contributed to our economic collapse. The delusion of “fossil fuel” increases the value of discovered oil vastly increasing the price of crude oil in the hands of oil companies. So it is understandable how American oilmen promote the delusion. The American scientists who support them do so not necessarily to increase the price of oil but rather in support of the religion Gradualism. This unholy alliance has led in large measure to our current economic collapse. The alliance has become a political force controlling America’s political system. Oil artificially limited in supply, an America that has made itself dependent on oil from unstable foreign countries we must defend expending vast American treasure and the blood of patriots, the creation of volatility in the price of oil, are all problems for America created by American scientists who have joined forces with American oilmen to promote delusions for political purposes. The answer: Federal support for the development of known, vast, deep onshore American oil and gas resources so we can become independent of foreign oil and immediately stimulate the American economy putting us on the path to economic revival.
