A comprehensive scientific rationale for the features of our material reality as expressed in flowing poetic form, beautifully illustrated, in 'Breath of the Cosmos', also available as a Kindle eBook (and in printed form from the Transfinite Mind website). This text details, on a page-by-page basis, the science being expressed in that poetic style in 'Breath': origins of the universe, particle formation, gravitation, interference of light waves, stellar nucleosynthesis, time and 'the arrow of time', Hubble expansion of space – and much, much more.

'Breath of the Cosmos', described by many as "inspirational", also opens the door onto consciousness as a proper field of scientific study. This text underlines those references to consciousness without seeking to offer any speculative 'scientific' rationale for this phenomenon. Rather, it supports the view firmly held by the founding fathers of Quantum Theory, Planck and Schrödinger (and many others), that consciousness is the source of the whole of our physical reality, and of our own being.

Each page, or set of pages, is introduced by header text for those pages in the flowing font of 'Breath' itself, in many cases backed by a 'taster' of its pictorial background where applicable. Page numbers for both the eBook and printed versions of 'Breath' are also given at the beginning of each section of these notes.
