

# There No Such Thing As Free Lunch Or Is There

When it comes to the topic of free lunch, most people believe that there's no such thing as a free meal. After all, everything in life comes with a price, right? While this may be true in certain situations, there are instances where you can actually enjoy a free lunch without any hidden costs. In this article, we will explore the concept of free lunch and unravel the truth behind it.

## The Myth of Free Lunch

The saying "there's no such thing as a free lunch" is often used to imply that everything in life has a cost associated with it. People are skeptical about receiving something for free, assuming that they will eventually have to pay for it in some form.

This skepticism is not without reason. In many cases, offers that appear to be free often come with hidden costs or strings attached. For example, a company might offer a free trial of their product, only to charge hefty fees once the trial period ends. Similarly, a restaurant might advertise a free appetizer, only to increase the prices of other menu items to compensate for the "free" appetizer.

With these instances in mind, it's easy to understand why people doubt the existence of a truly free lunch.

## **Exceptions to the Rule**

However, it would be unfair to dismiss the possibility of a free lunch entirely. There are instances where you can enjoy a meal without spending a penny.

One such example is when you receive a meal as a gift. Whether it's a friend treating you to lunch or a company providing meals for their employees, these scenarios offer a genuinely free lunch experience. No strings attached, no hidden costs.

Many cities also have organizations or charities that provide free meals to those in need. From soup kitchens to food banks, these establishments aim to ensure that nobody goes hungry. For those who cannot afford a meal, a free lunch can be a lifeline.

Another way to enjoy a free lunch is through promotional events. Companies sometimes organize events where they offer complimentary meals to promote a new product or to create brand awareness. These events often require you to participate in certain activities or sign up for their mailing list, but the meal itself is genuinely free.

## **Benefits of a Free Lunch**

While the existence of a completely "free" lunch may still be debatable, it's essential to acknowledge the potential benefits that come with such opportunities.

Firstly, a free lunch can save you money. By enjoying a meal without spending any of your hard-earned cash, you have more financial freedom to allocate those funds elsewhere.

Secondly, a free lunch can brighten your day and provide a sense of happiness. Whether you receive it as a gift or take advantage of a promotional event, there's something exciting about getting a meal for nothing. It can lift your spirits and bring a smile to your face.

Finally, a free lunch can create a sense of community and gratitude. When a stranger offers you a meal or when you witness the generosity of charities, it reminds us that there are good-hearted individuals willing to help others. This experience fosters a deeper sense of appreciation and can inspire acts of kindness in return.

## **So, Is There Such Thing As Free Lunch?**

While it is true that many so-called "free" offers come with hidden costs, it's important to recognize that exceptions to the rule do exist. Whether it's a generous gift, a charitable organization, or a promotional event, there are instances where a free lunch can indeed be enjoyed without any strings attached.

Furthermore, it's beneficial to embrace these opportunities when they arise. A free lunch can provide financial relief, bring joy, and remind us of the kindness that exists in the world.

So, the next time someone tells you that there's no such thing as a free lunch, remember that while it may not always be true, it's still worth cherishing those moments of unexpected generosity.

Since the days of Nikola Tesla free energy has been invented and reinvented.

These were the days before electrical engineering principles were solidified into a set of rules that assumed all was known. Then, inventors could think outside of a box that had not yet been formed.

There are fraudsters today who trade on our great desire to be free of the yoke of the ever-present electrical distribution systems, the burning of dirty fossil fuels, and the misery caused by such a large proportion of our earnings supporting energy. We'd all like electric cars running on free energy, or a house that drew its electricity from the vacuum, or anti-gravity and improved health.

Yes, some of these inventors declare not just free energy but anti-gravity and

healthier bodies!

Can it be possible that these great developments are present today? Or are their alleged developments simply more fraudulent acts of suppressive personalities?

Herein we debunk the debunkers and describe a number of free energy machines that draw energy from the vacuum. We also present Ret. Lt. Col.

Bearden's crystal clear explanations on an expansion of physics into a realm that few electrical engineers would trod, but where modern physicists have long ago walked.

John Bedini's mechanisms for free energy have been built again and again by more than 200 people, including this author. It works exactly as he has described.

We also show a few of the summaries Gary Vesperman has consolidated in his "130 Electrical Energy Innovations."

While debating the pros and cons of free energy, also ask yourself how it happens that the U.S. Patent Office, which shirks way-out ideas, has allowed 5,000 free energy devices to be patented -- and then was ordered to classify them as security risks so that no one else, including their inventors, could develop them further?
